2026.02.19 - Daily Summary

Summary

- **Start Time:** 7:09 AM
 - **Stop Time:** 4:35 PM
 - **Total Hours:** ~9 hours 26 minutes
-

Morning (7:09 AM - 11:59 AM)

The day began with troubleshooting Kelly Tools for Revit installation and configuration issues across multiple Revit versions (2023, 2024, 2025). Early activity included uninstalling and reinstalling the Kelly Tools add-in via Glary Utilities and file explorer, resolving folder access errors, and syncing Revit models with Central. Work on the **Layout Point Importer** tool was conducted in both Revit 2025 and 2023 test projects, including reviewing CSV grid offset data.

Development activity picked up significantly in Visual Studio Insiders, with deep work on `ComponentElementDataModel.cs`, `CollectorTestingCommand.cs`, and `DocumentExtensions.cs`. GitKraken was used for source control. The **Collector Testing Command** was debugged and successfully verified — Conduit elements were confirmed visible via the debugger. Around 9 AM, work shifted to **JetBrains Rider** for refactoring across multiple logic extension files: `ElementDataExtensions.cs`, `ElementExtensions.cs`, `ParameterExtensions.cs`, `ObjectExtensions.cs`, `ValueExtensions.cs`, and others. ChatGPT was consulted for C# method analysis, and ReSharper was used for code cleanup and renaming.

Focus then turned to the **Trapeze Vertical Member** push button enablers (`TrapezeVerticalMemberExtendPushButtonEnabler.cs` and `TrapezeVerticalMemberResetPushButtonEnabler.cs`), with extended debugging sessions in both Visual Studio and Revit 2023. The `DocumentExtensions.cs` refactoring was interleaved throughout, and Snagit was used multiple times to capture screenshots for documentation or communication.

Afternoon (12:00 PM - 4:35 PM)

After a brief break, afternoon work resumed with continued heavy debugging of the Trapeze button enablers across Revit 2023, 2024, and 2025. Email and Teams chat were checked periodically — notably a message confirming the trapeze functionality appeared to be working correctly across Revit versions.

Around 12:30 PM there was a brief personal diversion — browsing topographic maps of the Albuquerque, NM / Moab, UT region via Google Maps and related sites, and capturing Snagit screenshots of the area.

From approximately 1:00 PM onward, attention shifted to the **Project Information Editor** bug (KR-4021), which showed empty data in Revit 2025. This involved cross-referencing `ProjectInformationEntity.cs`, `DocumentExtensions.cs`, and `ElementDataExtensions.cs`, alongside live inspection of the VCS database via Navicat Premium (reviewing `Project` and `ProjectCustomDataUpdateLog` tables).

Development and testing continued through the afternoon with extensive work on `ElementDataExtensions.cs` and related files. Log files (Development Logger, Set Value Logger) were monitored continuously in Notepad++ to trace value-setting behavior. Bugs involving Invalid Enum and Unknown errors were investigated and iterated upon.

Later afternoon included a broad refactoring pass touching many service and data model files: `ComponentElementDataModel.cs`, `ContentIdentityUpdaterElementService.cs`, `FabricationPartInstancesUpdaterElementService.cs`, `ServiceOfFabricationPartElementService.cs`, `ElementService.cs`, `BillOfMaterialAssignCommand.cs`, `SpoolManageViewModel.cs`, `SuspendedSupport.cs`, `WeldUpdaterElementService.cs`, and many others. Obsidian was used briefly to review Release Notes for Cycle 90 (Version 26.2.4.1148). Teams chats were reviewed across multiple channels. The day concluded with a GitKraken commit/review session.

Evening

No activity recorded after 4:35 PM.

Summary by Focus Area

Focus Area	Applications / Files	Estimated Time
Kelly Tools Add-In Development	Visual Studio Insiders, JetBrains Rider — <code>ElementDataExtensions.cs</code> , <code>DocumentExtensions.cs</code> , <code>CollectorTestingCommand.cs</code> , <code>ProjectInformationEntity.cs</code> , <code>ParameterExtensions.cs</code> , <code>ValueExtensions.cs</code> , and many more	~5 hrs
Revit Testing & Debugging	Autodesk Revit 2023, 2024, 2025 — KTR test projects (Piping & Families, B141, KPSMC, Sheet Metal)	~1.5 hrs
Source Control & Build	GitKraken Desktop, NuGet Solution Management	~30 min
Database Inspection	Navicat Premium — VCS database (<code>Project</code> , <code>OperationServiceLog</code> , <code>ProjectCustomDataUpdateLog</code> tables)	~15 min
Communication & Coordination	Microsoft Teams (Kelly Tools, Dev Team, Infrastructure, Release channels), Outlook	~30 min
Documentation & Logging	Notepad++ (Development Logger, Set Value Logger), Snagit, Typora (<code>Technical-Documentation.md</code>), Obsidian (Release Notes Cycle 90)	~25 min
Personal / Incidental	Microsoft Edge — Topographic map browsing, Google Maps, ChatGPT	~15 min
