

2026.02.16 - Daily Summary

2026.02.16 - Daily Summary

Summary

- **Start Time:** 6:25 AM
 - **Stop Time:** 5:16 PM
 - **Total Hours:** ~10 hrs 51 min (with gaps)
-

Morning

6:25 – 9:04 AM — The day began with active development in Microsoft Visual Studio Insiders on the Kelly.Revit project, primarily focused on the Module Manager feature. Work involved editing multiple files including `ModuleManageView.xaml`, `ModuleManageViewModel.cs`, `ScopeSelector.xaml.cs`, and `ViewModel.cs`. Interspersed with Visual Studio sessions were brief checks of Outlook email, Microsoft Teams chats (primarily with Darrick Dunn), and Edge browsing covering Adobe account management, Linear issue tracking, and the Kelly Revit project board. Autodesk Revit 2023.1 was used to load and test a KTR project model, with several Sync With Central operations performed. Debugging sessions were active, stepping through Module Manager logic and inspecting runtime objects. A brief gap occurred between approximately 9:04 and 9:17 AM.

9:17 – 10:23 AM — Resumed Visual Studio development with continued work on `Module.cs`, `ModuleManageView.xaml.cs`, and `ModuleManageViewModel.cs`. Revit testing continued with the Module Manager, Spool Creator, and Module Creator tools. A Snagit screenshot was captured at 9:44 AM. Research was done via Edge browsing on C# MVVM patterns (`INotifyPropertyChanged` placement). Teams channels checked included General, Digital Assets, and Kelly Tools. The session ended around 10:23 AM with another apparent break until 11:31 AM.

Afternoon

11:31 AM – 12:09 PM — Development resumed with work on `Component.cs`, `Spool.cs`, `Module.cs`, `ViewModel.cs`, and `Spool.cs`. Research continued via Edge on C# MVVM `INotifyPropertyChanged` patterns and Stack Exchange. ReSharper tools were used for renaming, code cleanup, and extract method operations. Near noon, attention shifted to C# field

naming conventions, leading to ReSharper naming rule configuration via the Options dialog. GitKraken was used briefly. Work also touched `Kelly.Logic` solution files including `IdentifierTools.cs`, `LoggerTools.cs`, `EnumExtensions.cs`, and several value-type classes (`ModuleNumber.cs`, `LayoutPointId.cs`, `Tag.cs`, `ScreenInfo.cs`). ReSharper bulk rename operations were executed across the solution.

12:09 – 2:00 PM — Continued refactoring across `Kelly.Revit.Logic` (including `ProjectInformationEntity.cs`, `Names.cs`, `DocumentExtensions.cs`) and back in `Kelly.Revit`. GitKraken used for commits. Obsidian opened briefly for release notes. Teams communication active in Kelly Tools and General channels. Outlook checked for emails including an ACC message. A brief browse of Timberline Lodge travel info occurred. Work on `VerticalSupportMember.cs` was the longest single-file session of the day (~8 minutes). `ElementDataModel.cs` received approximately 9 minutes of focused editing. Notepad++ was used for log file and scratch note work.

2:00 – 4:00 PM — Intensive development continued across `ModuleManageView.xaml`, `ModuleManageViewModel.cs`, `ScopeSelector.xaml.cs`, `DocumentCache.cs`, and multiple `*DocumentCache.cs` files (`ModuleNumberDocumentCache`, `SpoolNumberDocumentCache`, `LineNumberDocumentCache`, `DetailingPackageDocumentCache`, `ServiceDocumentCache`, `SystemDocumentCache`). GitKraken used for additional commits. Revit testing continued with Module Manager. Teams conversation in Kelly Tools channel was active with screen captures from Snagit. Obsidian used to update release notes for Cycle 90. Late afternoon included work on `ElementControl.xaml` and `ElementControl.xaml.cs`. Creative Cloud Desktop and Adobe Lightroom Classic were opened briefly, with Lightroom catalog settings reviewed. Autodesk Desktop Connector was used to manage project connections. Session wrapped around 4:00 PM.

4:13 – 4:14 PM — Brief Teams and File Explorer check.

Evening

5:13 – 5:16 PM — Short evening session: checked ManicTime, Teams (Kelly Tools channel), and Navicat Premium to review `ProjectCustomDataUpdateLog` and `Project` tables in the VCS database.

Summary of Application Use

Application	Primary Activity
Microsoft Visual Studio Insiders	Primary development environment; editing Kelly.Revit, Kelly.Logic, Kelly.Revit.Logic solutions; debugging Module Manager, Component, Spool, and ViewModel classes
Autodesk Revit 2023.1	Loading and testing KTR project model; running Kelly Tools (Module Manager, Spool Creator, Module Creator); syncing with Central
Microsoft Edge	Research (C# MVVM patterns, naming conventions), Linear issue tracking, Kelly Revit project board, Adobe account management, news browsing
Microsoft Teams	Communication with Darrick Dunn, Kelly Tools channel, General, Digital Assets, and Data Points channels
GitKraken Desktop	Source control; committing changes across Kelly.Revit, Kelly.Logic, and Kelly.Revit.Logic
Snagit / Snagit Editor	Capturing and editing screenshots for documentation or communication
Obsidian	Viewing and editing Kelly Tools release notes and critique notes
Outlook	Checking inbox, sent items, and ACC-related emails
Navicat Premium	Querying VCS database tables (ProjectCustomDataUpdateLog, Project)
Notepad++	Reviewing log files and scratch notes
Adobe Lightroom Classic	Brief session; catalog and preferences review
Creative Cloud Desktop	Launching and managing Adobe apps
Slack	Brief check of JHK IT general channel
File Explorer / Windows Explorer	File navigation across project directories
ManicTime	Time tracking review
Everything	File search
